AlphaNovoCam 4K UHD

Ultra High Definition 3MOS Camera System

- Small and lightweight camera head which is fully waterproof
- Immersible cable included
- 4 programmable buttons: 8 functions
- Plasma or peracetic acid sterilization
- 4K resolution, 16:9, 3840 x 2160 px

- On-screen menu, multilingual
- USB archiving interface (optional)
- Freeze function
- High-end video image quality
- High speed shutter
- Digital signal processing
- Title generator & remote control
- Digital zoom, up to 2.5x
- Smoke correction can be set

- User settings can be stored, up to 10 individual settings

Description

With our new endoscopy system **AlphaNovoCam 4K UHD** we want to support surgeons in their demanding precision work.

The term 4K UHD stands for the resolution 3840 x 2160 px of videos and screens – which means higher image quality with deeper range of colours and magnified picture. The advantage for the user: excellent overview and easy recognition of very fine differences.

The **AlphaNovoCam 4K UHD** offers excellent resolution and provides, due to its latest 3MOS technology, bright and clear ultra high definition pictures, that allow visualizing even detailed structures. The integrated digital image processor ensures consistent high quality images of remarkable contrast and natural colours. Special highlights are the 4 programmable camera buttons which can be adapted for the surgeon as well as 10 programmable settings. The multilingual menu also ensures worldwide usability.

Video recordings can be made up to 24 hours with a resolution of 1920 x 1080 px / 60 fps. The camera is able to reproduce the extended color space BT.2020 in addition to the BT.709 color space for HDTV. (Prerequisite is a BT.2020 compatible monitor)

Technical data

Line voltage	100–240 Vac
Sensor	3MOS
TV system	Progressive scan at 50/60 Hz
TV resolution	1600 TV lines, horizontal
Image resolution	3840 x 2160 px (UHD)
Aspect ratio	16:9
Outputs digital	1x HDMI 4K (3840 x 2160 px) 1x HDMI Full HD (1920 x 1080 px) 4x 3G SDI (4K) (3840 x 2160 px) 1x 3G SDI (Full HD) (1920 x 1080 px)
Archiving	1x USB (A) (optional)
Interfaces	1x USB (Type A) (USB-keyboard) 1x Remote IN (footswitch) 2x Remote OUT (video printer, video recorder) 2x RJ45 (service interface)
Weight	
Control unit	6.2 kg
Camera head	Approx. 200 g (w/o TV-coupler)
Dimensions	
Control unit	340 x 115 x 340 mm (W x H x D)
Camera head	Ø 43 mm, l = 86 mm
Camera head cable	l = 3 m

AlphaNovoCam II USB

Digital 1CCD Camera System

- Small and lightweight camera head which is fully waterproof
- 3 programmable buttons: 6 functions
- Plasma or peracetic acid sterilization

- Analog and digital video outputs (Output resolution up to 1080i)
- On-screen menu for individual camera settings
- USB archiving interface
- Title generator
- Freeze function
- Digital zoom
- Digital signal processing

- Anti-Moiré filter for use of flexible endoscopes

Description

The single-chip camera system, **AlphaNovoCam II**, offers all conveniences and functions of a high-end camera at minimum costs. The integrated USB interface can be used for saving images and videos avoiding the purchase of an additional medical recording system. Images and videos are stored in standard quality directly on the USB flash drive.

Optional texts for each image and video can be saved by connecting a keyboard.

Analog and digital outputs (HDMI) allow connection of the camera to a variety of monitors and formats. The on-screen menu can be used for selecting all functions and parameters of the **AlphaNovoCam II** to set individual preferences.

The camera features, such as Anti-Moiré filter, adjusting the brightness and accessing the measuring menu, can be chosen by pressing a button. This turns the camera into the ideal imaging system for most endoscopic applications.

The light weight, ergonomic camera head can be controlled by using one of the three buttons to enhance working comfort.

Light Sources

21

AlphaLED Universal

LED Light Source

- Outstanding lifetime, min. 20.000 h
- Reduction of energy & service costs

- Universal light cable adapter with unlocking mechanism which automatically switches to standby function in case of removing the cold light cable
- Compatible with Gimmi®/Storz, Wolf, Olympus, Stryker light cable

- Intensity control to adjust the desired brightness

- Standby function to switch off the light between procedure

Description

Due to the innovative LED (Light Emitting Diode) technology a change of the lamp module is not required. The long-life lamp insures a minimum of 20.000 hours of lightning.

The universal light cable adapter enables a safe connection of light cables from different manufacturers.

In combination with Gimmi's cameras, the cold light source yields a particularly brilliant aperture illumination and colour rendition. Compared to Xenon light sources the light of the **AlphaLED Universal** can be used immediately because rundown time and postcooling is not required.

Technical data

Line voltage	100–240 Vac
Power consumption:	
Upper voltage range	
Normal operation	0.42 A / 230 V / 97 VA/W
Peak	1.6 A / 230 V / 368 VA/W
Standby	0.05 A / 230 V / 12 VA/W
Lower voltage range	
Normal operation	0.83 A / 115 V / 95 VA/W
Peak	3.5 A / 115 V / 403 VA/W
Standby	0.05 A / 115 V / 6 VA/W
Max. loudness level	52 dBA
Lamp	LED
Colour temperature	Acc. 6.500 K
Lifetime lamp	Min. 20.000 h
Interfaces	Universal light cable adapter: Gimmi®/Storz, Olympus, Wolf, Stryker
Weight	Approx. 9.3 kg
Dimension	340 x 152 x 340 mm (W x H x D)

AlphaXenon Light 300 W

Xenon Light Source

- 300 W Xenon
- Post-cooling
- Noise reduced cooling
- Easy service access
- Remaining bulb life indicator
- Manual/automatic light source switch
- 250 W Halogen (emergency output)
- Electromechanical intensity control and standby function

Description

The exceptional luminous power of the system produces 25% more light than comparable devices owing to the innovative bulb technology. All Gimmi® **AlphaXenon Light** sources are provided with a temperature controlled post-cooling feature for safeguarding the bulb system and extending its life expectancy.

A rapid service access allows the bulb to be replaced together with the premounted heat sink in the fixture. This guarantees a continuous and efficient cooling.

In combination with Gimmi's cameras, the cold light source yields a particularly brilliant aperture illumination and colour rendition. Pressing a button controls the intensity by activating a diaphragm while the colour temperature remains constant.

Technical data

Line voltage	100–240 Vac wide range PSU
Maximum power consumption	370 VA
Bulbs	
Xenon bulb module 300 W	Colour temp.: approx. 6.000 K Lifespan approx. 500 h**
Halogen bulb 250 W	Colour temp.: approx. 3.600 K Lifespan approx. 50 h**
Interfaces	Light guide connection: System Gimmi®/Storz
Video-in terminal	1x Video, BNC
Aperture	Electromechanical control
Weight	Approx. 11 kg

AlphaXenon Light 180 W

Xenon Light Source

- 180 W Xenon
- Post-cooling
- Noise reduced cooling
- Easy service access
- Remaining bulb life indicator
- Manual/automatic light source switch
- Electromechanical intensity control and standby function

Description

A rapid service access allows the bulb to be replaced together with the premounted heat sink in the fixture. This guarantees a continuous and efficient cooling. **AlphaXenon Light** emits a light beam focussed to a narrower diameter which allows the application of endoscopes and optical waveguide of smaller active diameters with high luminous efficacy at the distal end of the endoscope. The colour temperature of approx. 6.000 K corresponds to sunlight.

In combination with Gimmi's cameras, the cold light source yields a particularly brilliant aperture illumination and colour rendition. Pressing a button controls the intensity by activating a diaphragm while the colour temperature remains constant.

Technical data

Fibre Optic Light Cables

31

Fiber Optic Light Cables

LED – Xenon – Halogen

LED

High-transmission
light cable

Xenon

High-temperature resistant
Light cable

Halogen

Standard
light cable

Description

The light cable from Gimmi® serves to absorb light from a light source and to transfer light using a targeted light inlet and outlet in an endoscope or in another optical medical device.

The high-temperature resistant and high-transmission light cables are an advancement of the standard light cables and have the following good characteristics:

- Light weight and yet able to take a tensile load
- Very flexible even with the reinforcement
- Temperature-resistant at the light entry
- Biocompatible silicon tube with bend protection in its interior (also on the standard light cable)

High-transmission light cable

The high-transmission light cable is specifically designed for LED light sources. Low light loss and optimized light transmission, through new developed light fibers, increase the illumination. In combination with a LED light source, an enhancement of the light intensity up to 15% in comparison to the high-temperature light cable is possible.

High-temperature resistant light cable

Inside this light cable the optical fibers are not adhered, but melted. Thereby, the temperature resistance increases at the light entry and the transmission by about 20%. The light cables are ideally suited for use with a Xenon light source. The light cable guarantees maximum temperature resistance even in long-term surgeries.

Standard light cable

Inside this light cable, adhesive is used to connect the optical fibers. Thus, the light input is not filled 100% with optical fibers. The cable is a flexible and at the same time favorable variant for the Halogen light source. This optic light cable is not suitable for Xenon and LED light sources.

Insufflator

37

AlphaDuoLap 30 I and 45 I Insufflator

Picture:
AlphaDuoLap with
smoke evacuation and
heating option

- Smoke evacuation (optional)
- External gas filter
- Microprocessor controlled
- Fast insufflation up to 45 l/min
- Low Pressure Insufflation System (LPS)
- Exsufflation in case of overpressure
- Selectable flow
- Gas heating (optional)
- Neonatal mode* up to 12 mmHg
- Bariatric mode up to 30 mmHg

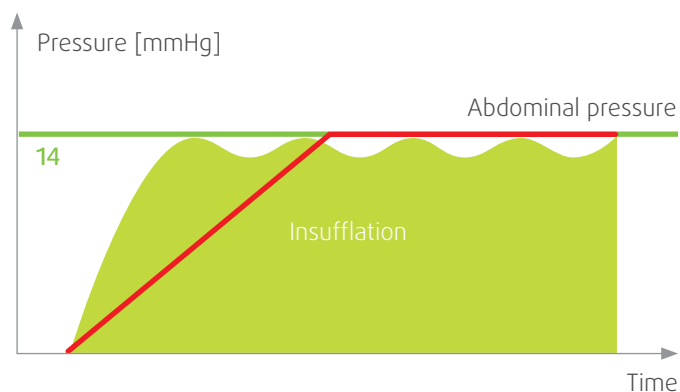

Description

Five generously dimensioned and logically arranged displays inform the user about all relevant values of the insufflation at any time. The expanded LPS (low pressure insufflation system) assures maximum safety, particularly in preselectable, neonatal* and also bariatric applications (up to max. 30 mmHg). The insufflation pressure is limited to the preselected value, which efficiently prevents, for example, a possible emphysema (in case of a misplacement of the insufflation instrument in the tissue). Safety features such as active exsufflation in case of sustained overpressure in the connected body cavity are ensured. The newly created, automatic diagnosis function allows quick servicing of the units. This makes the annual service easy and fast. An external gas filter in the gas supply line prevents contamination of the device and thus a risk to the patient, e.g. from contaminated gas. The proven insufflation gas heating system by means of an autoclavable heating tube* is available as an optional extra. The intended use of the Laparoscopic Insufflator **AlphaDuoLap** is to establish and maintain a pneumoperitoneum with CO₂ gas for operative Laparoscopy. The ultra low insufflation mode of the device is indicated for pediatric use.

* Not available for the USA.

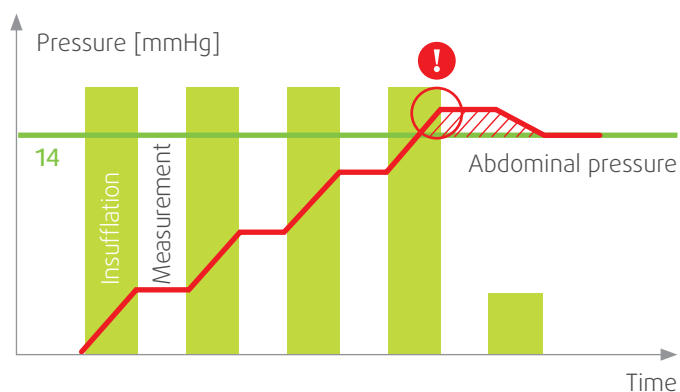

LPS Gimmi®

In maximum mode the insufflator uses the “Intelligent Insufflation System” (IIS). Analyzing the maximum cavity of the body, the insufflator can control and adapt the necessary gas flow and pressure continuously. That guarantees a high insufflation rate with low pressure fluctuation at a low noise level.

Other technology

Other devices do not have a continuous gas flow, what leads to pressure fluctuations and no regular inflation of the abdomen.

Technical data

Line voltage	100–240 Vac wide range PSU
Maximum power	55 W standard version
consumption	100 W with heating device 140 W with smoke evacuation
Insufflation medium	CO ₂ medical grade (USP)
Maximum gas flow	30 and 45 l/min
Pressure setting range	3 to 30 mmHg
Tolerances	
Abdominal pressure	± 3 mmHg
Gas flow	± 0.5 l/min
Consumption	± 15%
Weight	
	Approx. 8.0 kg without heating device Approx. 8.5 kg with smoke evacuation
Dimensions

Insufflator assembly example

Instead of the heating tube (**S.2832.85 III**), it is possible to use a 3 meter silicone insufflation tube (**S.2815.70 II**) or a disposable, sterile, 3 meter insufflation tube (**S.2815.76**). For both variations there is no filter adapter (**S.2815.66**) necessary.

Caution: Federal (USA) law restricts this device to sale by or on the order of a physician or other licensed practitioner.

Suction/Irrigation Pumps

43

AlphaVersaPump

Suction/Irrigation Pump for Four Applications

- Four applications in one unit or as a stand-alone solution

- Touch screen GUI
- Footswitch (optional)

- Vacuum pump connection

- Tubing recognition: RFID
- Instrument flow recognition

Description

With its different features and application possibilities, Gimmi's **AlphaVersaPump** offers a variety of advantages for surgeons and OR-staff as well as for the patients. The four fields of application (Laparoscopy, Hysteroscopy, Urology, Arthroscopy) in one unit can be configured individually, appropriate to the needs of the user. The unit includes all specific functions of requirements and safety.

Technical data

Line voltage	100–240 Vac
Power consumption	
Normal OP 100 V	0.75 A / 75 VA
Normal OP 240 V	0.4 A / 96 VA
Defibrillator protection	No
Protection call (IP-code)	IP41
Max. load	7 kg
Max. negative suction pressure	450 mmHg
Adjustable values:	
Flow	
Arthroscopy	0.1–1.8 l/min
Hysteroscopy	50–500 ml/min
Urology	25–500 ml/min
Laparoscopy	1.0–1.8 l/min

AlphaPurgator

Suction/Irrigation Unit for Laparoscopy

- Suction and irrigation up to 3 l/min
- CF classified
- Simple and economical operating concept
- The standby function minimizes the noise level in the OR

- Irrigation connection

- Suction connection

Description

Gimmi's **AlphaPurgator** offers the user a special standby function to minimize the noise level in the OR. After reaching the required pressure and vacuum values, the silenced pumps are switched off electronically. The result is a pleasant silence in the OR without any limitation of the performance data.

Inexpensive special filters constantly ensure sterile conditions (for the protection of the patient) and also protect the pump against contamination. Reusable standard silicone tubes guarantee low operating costs. And of course disposable tubing sets can be used as well.

The **AlphaPurgator** is equipped with a rugged two liter – optionally four liter – suction vessel made of sturdy polycarbonate with integrated overflow protection. The secretion suction vessel was designed to work with secretion collection bags – optional without a system change. Special filters ensure optimally sterile conditions. Suction and irrigation power can be controlled directly by using the handinstruments by the use of disposable and reusable instruments.

Technical data

Line voltage	230 Vac
Maximum power consumption	140 VA
Rinsing performance	Up to 3 l/min (depending on the instruments and tubings used)
Aspiration performance (liquids)	Up to approx. 3 l/min (depending on the instruments and tubings used)
Aspiration performance (gas)	> 20 l/min short term with 2 liter secretion bottle approx. 8 l/min permanent
Pressure in rinsing bottle	0.3–0.5 bar overpressure
Vacuum in secretion receptacle	0.5–0.7 bar vacuum
Weight	Approx. 7.6 kg (w/o bottle holder)
Dimension	340 x 140 x 340 mm (W x H x D)
Technical data are subject to change without notice.

Shaver System

49

AlphaArthroDrive

Arthroscopic Shaver System

- Nine oscillation modes
- On-screen display capabilities
- Autoclavable handpiece
- Recognized automatically
- Two buttons – reliable cleaning and disinfection process
- Wide range of rotational speeds
- 3 modes: forward, backward and oscillation

Description

With our new arthroscopy shaver system **AlphaArthroDrive**, developed in collaboration with Vimex, we are featuring an efficient working process.

The system can be activated and controlled via handpiece and/or optional with footswitch.

The handpiece is ergonomic and with its weight of 325 g one of the lightest on the market.

Technical data

Shaver control unit

Power supply	100–240 Vac
Oscillation modes	9 different modes
Weight	4.8 kg
Dimension	330 x 96 x 250 mm (W x H x D)

MediCap® USB300 HD

High Definition Medical Recorder

- Built-in 2.5" monitor
- HD and also SD Images
- Still Images: JPEG, BMP, TIFF, DICOM
- Image Resolution up to 1920 x 1080 px
- HD Video: MPEG4/H.264, 1080px/i, 720px
- SD Video: DVD-quality
- Network connection*
- Video connectors: DVI, HD SDI, RGB, Composite, VGA**, S-Video and BNC
- Records to internal hard drive, network drive, USB hard drive or USB flash drive

* Via standard T10/100/1000 ethernet connector.

** HDMI support via included adapters.

Description

MediCap® USB300 HD is a cost effective system to capture images and/or videos in medical procedures.

MediCap® USB300 HD records high definition videos from your endoscopic and surgical camera, etc. and saves the data to an internal hard drive or external USB flash drive.

MediCap® USB300 HD is with its steel case and fluid resistant front panel, built to withstand the rigors of the OR, and it's so compact it will fit on any cart.

Another feature is the hands free capture via standard 3.5 mm mini-jack. This works with any „closed contact“ switch, e.g. endoscope trigger or optional foot pedal. Furthermore the patient information can be entered via optional keyboard.

Technical data

Power	100–240 Vac, 3-prong AC jack
Case	Rugged metal case with high-impact plastic faceplate
LCD Monitor	2 1/2", full color (for video confirmation only, not for diagnosis)
Buttons	Sealed membrane, fluid resistant
Video input	DVI (RGB via adapter), HD SDI, S-Video, Composite
Video output	DVI (RGB, VGA via adapter)
Video formats	H.264/MPEG4 (1080 px/i, 720 px, NTSC/PAL)
Image formats	JPEG, BMP, TIFF and DICOM
Networking	RJ45 10/100/1000 Ethernet
Internal storage	Internal hard drive, 320GB (for networked systems use only)
External media	USB flash drives or USB hard drive
USB support	USB 2.0, high speed 1x front connector 2x rear connectors
Footswitch/trigger	Standard 3.5 mm mini jacks
Weight	1.8 kg
Dimension	240 x 211 x 63 mm (W x H x D)

AlphaLine

Equipment Trolley – General Information

Standard equipment

Top view

Description

A trolley is the solid base of a functional endoscopic tower. Individuality and flexibility are important requirements for the smoothly workflow in the operating room.

The **AlphaLine** trolleys of the latest generation enable a perfect holding fixture and positioning of the Gimmi® endoscopic units and provide the units to the user for an optimal use. A wide range of optional accessories make the **AlphaLine** trolleys an ideal assistant for the surgeon. Using the same footprint, the height of the new **AlphaLine** trolley was optimized.

All medical units carry the CE-sign and have been controlled and tested according to national and european standards.

Based on our years of experience in image reproduction, insufflation, irrigation/suction techniques, and also the on-going dialogues we have with well-known surgeons and the feedback we receive from them, our units have the functionality, the quality, the safety features and efficiency that are imperative in the new generation of operating theatres.

A generous warranty agreement constitutes an additional safety factor to the user.

Our service department has all necessary spare parts to carry out immediate maintenance and repairs.

In order to maintain the latest technical standards, a software update is automatically instigated during servicing.

We at Gimmi® are particularly concerned that all hygienic standards of our functional units can be maintained without effort.

Our customer service is there to assist both customer and user and will be pleased to give any information required.

We reserve the right of changes of the brochure/catalogue images by modifications of the product design and further developments without prior notice.

This brochure/catalogue is intended for preparation of offers or purchase and sale of our products only. Any reproduction of its contents, as a whole or in part, is not permitted. In case of misuse we may reclaim the brochure/catalogue and price lists and reserve the right to take legal actions.
